Shop support draft desk

The system in one sentence

Sort shop support requests and help staff write replies they check before sending.

Key design calls

Start with review drafts. Rejected: Automatic action. Why: Staff retain every decision.

Use supplied sources. Rejected: Open browsing. Why: Claims need checked evidence.

Code checks hard facts. Rejected: Model authority. Why: Values and access must be repeatable.

Who acts and who decides

Action	Autonomy
Check supplied evidence	acts alone
Draft an explanation	suggests
Send or take action	human decides

Top risks by RPN

FM4 | Revoked source access | RPN 108

FM1 | Wrong customer order | RPN 96

FM2 | Invented refund | RPN 84

FM3 | Expired shop policy | RPN 84

FM6 | Stale concurrent replacement | RPN 84

Launch blockers and owners

H1, H3, H5: Handle product questions, delivery questions...; One workday response target, coordinator...; Proposed quality target is 95%... Owner: Shop support lead.

H2: Authorized staff supply source bundles... Owner: Integration owner.

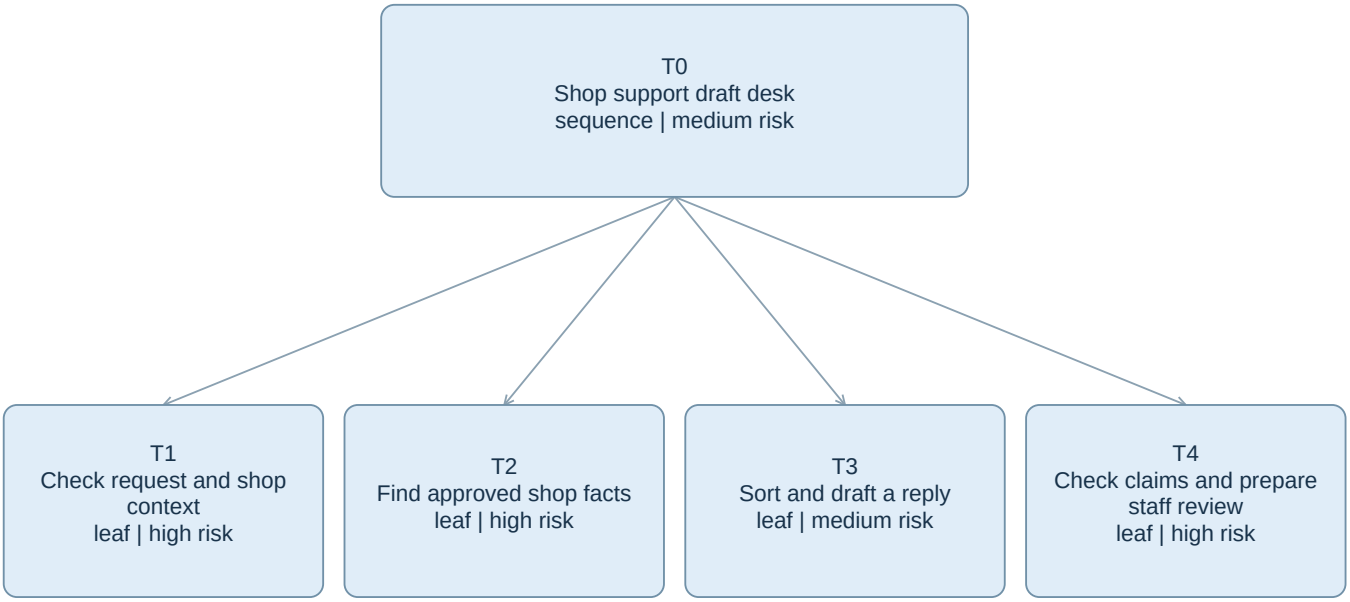
Illustrative cost per case

USD 0.00720 per case in the model budget. This is an estimate, not a current provider quote. Staff and tools cost extra.

Review status: self-review; round 3; pass.

Proposed design. Full rules and blockers: design.json and assumptions.md.

Task tree



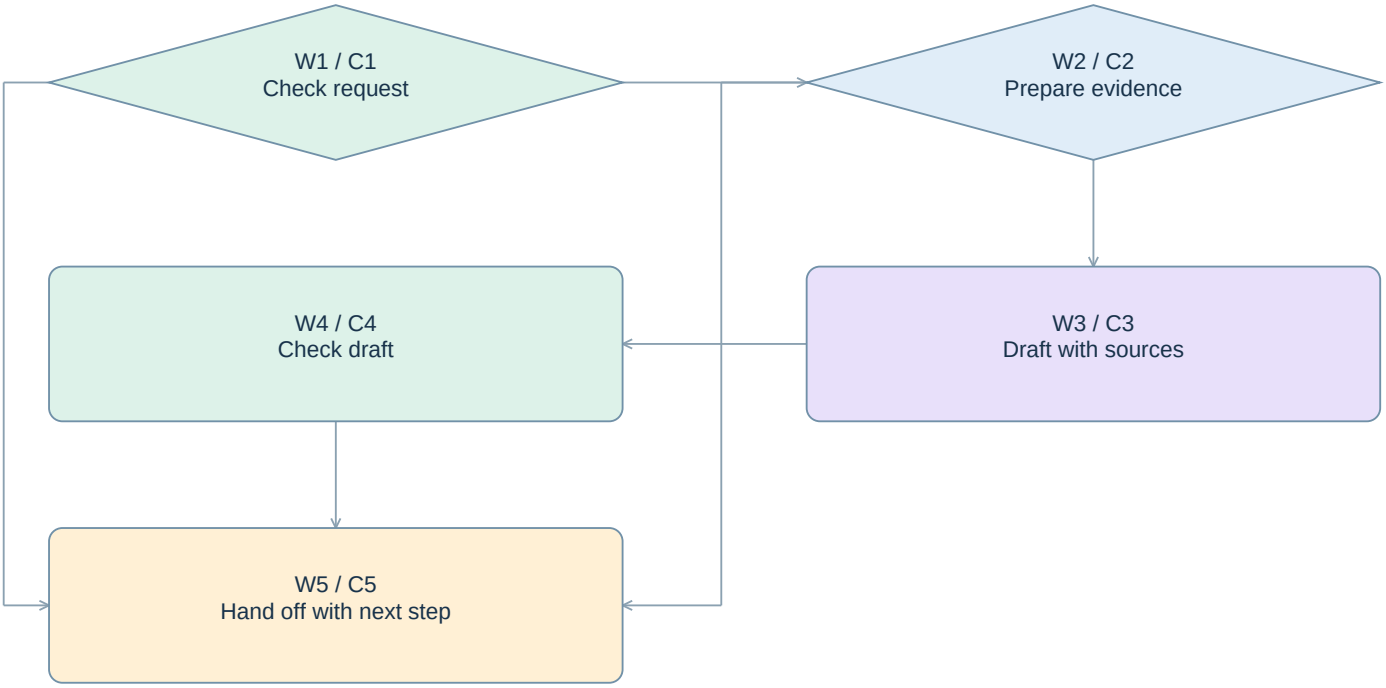
Labels show each leaf mode and risk. Full task inputs, examples and limits are in design.json and PRD.md.

Plain words and scope

Handle product questions, delivery questions and complaints. Staff send replies in their own support tool. Exclude refunds, order changes and automatic sending.

A fingerprint is a check that the approved details have not changed. A record ID is proof from a tool that the change was saved.

Workflow diagram



Diamonds mark choices. Arrows show all routes, including retry and recovery. Exact branch rules are in architecture.md.

Top risks and release checks

Risk heat table - severity x occurrence

Each cell names the risks at that severity and occurrence. The full scores, causes, controls and owners are in fmea-register.csv.

Risk	Control summary / full register linked
FM1 Wrong customer order	Exact authenticated subject match before model context.
FM2 Invented refund	Code flags payment or compensation requests; model never claims an action.
FM3 Expired shop policy	Compare supplied approved policy manifest version before drafting.
FM4 Revoked source access	Fresh access checks before source reads and final ready output.
FM5 Model output unavailable	Bounded call and explicit fallback; no ready success claim.
FM6 Stale concurrent replacement	Compare revision at intake and handoff; same requestId/revision returns same artifact; changed intent needs next revision.
FM7 Missing receipt	C4 verifies receipt before ready. A failed receipt remains unconfirmed; staff may create a new local export. No external commit exists.
FM8 Cancellation	Cancellation precedes draft; cancellation during a call discards response and returns cancelled receipt.
FM9 Overdue human review	Packet includes proposed one-workday target, owner and backup. An operator checks pending list at daily opening; overdue remains visibly pending. Receiving...
FM10 Exact duplicate request	Return same local artifact for exact request/version; changed revision never reuses a draft.
FM11 Conflicting supplied evidence	Do not pick one conflicting record silently; name both sources and ask staff to resolve.
FM12 Missing supplied evidence	Allow provisional intake, list missing source and owned next step; no invented claim.
FM13 Forged citation	Verify citation ID/version/quote against frozen authorized view, never only syntax.

Risk scores are proposed estimates. They are not measured odds or risk acceptance.

Components and contracts

This inventory is a summary. Exact typed inputs, outputs and permission rules are in architecture.md and the build milestone files.

Component / group	Responsibility	Task IDs
C1 / Code: validation	Check case envelope	T1
C2 / Code: tools	Build trusted evidence view	T2
C3 / Agents (LLM)	Draft bounded recommendation	T3
C4 / Code: validation	Check claims and output proof	T3, T4
C5 / Code: human triggers	Prepare human handoff	T4

Shared control boundary

Code checks identity, money, dates and limits. A model may suggest a choice. It cannot authorise or perform a business write.

I1 major resolved: W1-W5 decision fields were authored as strings rather than booleans; structural validation fails. Repair type without removing predicates from description.

I2 major resolved: F1-F3 alternatives were authored as strings rather than arrays; structural validation fails.

I3 major resolved: Exceptional paths reach C5 without a C4.checked value. Declare a typed union handoff envelope carrying exception evidence; do not require an absent successful artifact.

I4 major resolved: Supplement domain cases with exact duplicate, evidence conflict, missing source and forged citation cases; release must include these actual IDs.
